Wind Direction

WSW

Minimum
Temperature

-0.8 °C

July Wind Rose

The wind rose shows the general wind speed and direction for that month.

The circle represents the different directions, with a 'wedge' representing where the wind blew **from**.

The length of each wedge shows how often the wind blew from that direction.

The different colours indicate the different categories of speed.

In this example, the main wind direction was from West-South-West 27% of the time and was from the West North West around 21% of the time.
